EDUCATION

B.M.S. College of Engineering

Bachelor of Engineering in Artificial Intelligence and Machine Learning – CGPA: 8.95 / 10.0

Bengaluru, India

Aug. 2023 – Jun. 2027

EXPERIENCE

Samsung R&D Institute Bangalore

Research Intern

Bengaluru, India

Jan. 2026 – Present

- Trained Named Entity Recognition (NER) models in Python to detect and anonymize Personally Identifiable Information (PII) across large-scale enterprise datasets.
- Built and optimized backend data pipelines for high-volume data ingestion and processing, increasing throughput by 40% and reducing pipeline failures through improved error handling.

UTSAV 2025 & 2026, BMSCE

Full-Stack Developer

Bengaluru, India

May 2025 & 2026

- Architected a full-stack event platform using React.js and Express.js that scaled to 20,000+ concurrent users under peak load with zero downtime.
- Optimized REST API response times by 35% by adding database indexes on high-frequency query fields, rewriting inefficient queries, and implementing server-side caching.

PROJECTS

Circulet – Campus Peer-to-Peer Marketplace | Next.js, GraphQL, PostgreSQL, Cloudinary

- Developed a peer-to-peer marketplace for campus users with OAuth 2.0 authentication and Role-Based Access Control (RBAC) for buyer, seller, and admin roles.
- Improved query performance by 40% by optimizing GraphQL resolvers, reducing over-fetching, and applying composite indexes to frequently queried PostgreSQL tables.

BMSCE IEEE Computer Society Platform | Next.js, MongoDB, Prisma ORM, GraphQL, Tailwind CSS

- Built a full-stack event management application with an RBAC admin dashboard supporting 500+ users across registration, scheduling, and participant tracking workflows under sub-domains.
- Designed scalable GraphQL APIs backed by MongoDB and Prisma ORM, enabling efficient querying and real-time data retrieval across event and user collections.

EchoSelf – AI Media Generation Pipeline | Python, FastAPI, Docker, Next.js

- Built a machine learning inference pipeline for AI-driven image and audio generation using FastAPI microservices, containerized with Docker for consistent deployment.
- Reduced end-to-end media generation latency by 30% by optimizing model inference throughput and improving asset delivery through CDN integration.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, C++

Backend: Node.js, Express.js, FastAPI, GraphQL, REST APIs, Prisma ORM, Redis

Frontend: Next.js, React, Tailwind CSS, Webpack

Databases: PostgreSQL, MongoDB, SQL, Data Modeling, Query Optimization, Indexing

Machine Learning: Natural Language Processing (NLP), Reinforcement Learning, Python

Security: OAuth 2.0, Role-Based Access Control (RBAC), API Security, Authentication

DevOps and Cloud: Docker, Kubernetes, CI/CD Pipelines, Git, Linux, Google Cloud Platform (GCP)

LEADERSHIP AND ACTIVITIES

Chairperson, BMSCE IEEE Computer Society (2025 – Present): Led a 700+ member technical student organization; planned and executed hackathons, workshops, and industry speaker sessions.

Student Leader, IEEE Signal Processing Society Bangalore Chapter (2024 – Present): Represent student interests and drive technical initiatives within the IEEE SPS Bangalore Chapter community.

Web Development Lead and AI Co-Lead, Google Developer Groups BMSCE (2024 – 2025): Delivered web development and AI/ML sessions to 500+ students, increasing technical engagement.

Student Core Coordinator, Phase Shift 2025 (2025): Coordinated technical operations for an international symposium with 10,000+ attendees from engineering institutions across South India.
